

Saint Francis of Assisi and **sandbox** education proudly present

Summer 2017

STEM Camp

Coding | Robotics | Video | Design

This exciting week long camp will engage students in hands-on activities with cutting edge technology. Students will learn to think like designers and coders by combining engineering concepts, game design, robotics and video editing.

Through problem solving and collaboration, students combine Science, Technology, Engineering, and Mathematics in the project based environment that educational institutions worldwide are using to introduce young people to the future careers that are already driving the new economy. This is the new BC curriculum at its best!

50% of all camp earnings will go to the SFA's New Applied Design Program to purchase new technologies for the 2017/2018 School year!

Tuesday, Aug. 8th - Friday, Aug. 11th
9:00am - 3:00pm

Primary Camp - Ages 10-13
Cost: \$230 per student

Bring your own lunch.
