Communicable Disease Health Protocols 2024-2025

As mentioned previously, we have moved from COVID-19 Protocols to Communicable Disease Health Protocols. Many of the recommendations are similar such as:

- 1) Keeping children home if they are sick .
- 2) Frequent washing of hands, especially prior to eating.
- 3) Keeping distance and staying outdoors, especially during physically intense activities.
- 4) Using proper sneezing etiquette (cover sneezes and wash hands).
- 5) Optional use of masks indoors or when in proximity, if not feeling well, or to protect yourself for immunocompromised families, or persistent coughing.
- 6) Testing for COVID PRIOR to coming to school if anyone at home or at work has tested positive with COVID.
- 7) Staying up to date with Public Health Recommended Vaccinations including Boosters for Flu, Covid-19, Measles, and Chicken Pox.
- 8) Going to a doctor when rashes appear on face, hands or body.
- 9) Remembering to keep updated medical records. The school, office or staff cannot administer medication at school unless it is for life saving reasons (Epi-Pen, etc.) and the medical forms are from a doctor.
- 10) Remembering to respect all families' needs for medical Privacy.
